## Birmingham Chamber of Commerce

Prepared by Perkins J. Prewitt, Director of Publicity

Birmingham, \*the Industrial City Beautiful, where coal and iron and limestone lend themselves to the making of an industrial world, is now engaged in the propagation of fish and the growing of lily bulbs.

And, as with everything else, on a big scale.

It was but a short step from huge tanks—tanks that hold tons of water, oil and gas and almost every other known liquid—to aquariums.

Vats for dipping cattle came first—back when the federal government first passed the anti-tick law.

Then came—

But what has all this to do with fish—and lily bulbs? Just this: Of the 2,000 articles manufactured by the more than 800 industries in Birmingham, alumninum aquariums, cast in many sizes and designs, have become somewhat synonomous with steel rails and wire nails—not exactly, but somewhat. This is where fish come in.

The fish, in almost every shape, size and color (it being understood that we are not trolling for tarpon or casting for trout, or engaged in any strictly piscatorial pursuit), are hatched in the very shadow of the aquarium foundry. So what fun! The Isaac Waltons don't need to have it all.

Everything from the flivver fish—that is, gold fish—to the most costly tropical fish is grown. Every color of the rainbow is matched and re-matched. Stamp collectors are simply not in it. Speaking of hobbies, of course.

As for lilies (and of course other water plants), the manufacturers of the aquariums found that there was a real demand for water plants, and, also, that Birmingham could supply the market with bulbs some three to four months earlier than other sections of the country, in January as against March and April. So the growing lily bulbs became an art as well as the casting of aluminum aquariums.

All of this, of course—that is, the growing of fish and lily bulbs—is made possible by a benign Dixie sun. Extreme cold weather seldom occurs, and freezing temperature rarely continues more than 48 hours . . . The summers are long and pleasant, never excessively hot. Rainfall is ample and well distributed. The temperature is reflected by the long growing season (period between frosts), which ranges between 240 and 300 days, depending on the section, and the year around outdoor working season for industries.

Thus the lily bulbs and fish are accounted for: once they are brought into the land of the living, it is an easy matter for whoever wishes to raise them to do so—for, be it remembered, the aquariums are portable—like the potted hydrangia on your front porch—and can be moved in and out, to suit the temperature.

Which brings one to this conclusion: The fish are still suckers if they don't bite at this attractive bait, and the lilies—well, just consider . . . "They toil not, neither do they spin" . . . but they certainly grow better in Birmingham-built aquariums.

\*The only place in the world so far as is known where these three necessary ingredients for the making of iron are found in close proximity.

# AQUARIUMS

## Select a Better Home Aquarium

Your aquarium is the home of your aquatic life. Your species must have the proper kind of an aquarium in which to thrive.

To be successful with your undertaking, select an aquarium that has been designed correctly by skilled workmanship. The highest quality of materials is essential for long livelihood.

Our foundry is thoroughly equipped to make each one properly. Our Better Home Aquariums are made by expert designers, with knowledge derived from twenty years of experience practice. We use the best material obtainable. Each one is made from all cast aluminum, beautifully designed, highly polished, with sides of bulb edge or crystal plate glass.

We guarantee each one to be rust proof and put together with the best of aquarium cement.

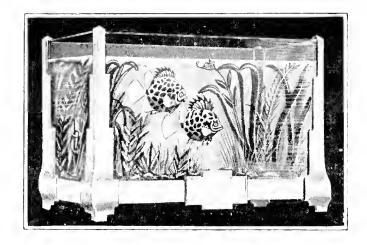

Besides being ornamental, they are known for their durability, which is a merit that has established our success.

## Interesting Hobby

An aquarium is a fascinating project. To really make it more so, don't over-do it at first. Your interest will last longer in moderation. You will find this hobby an everlasting stimulating pleasure.

If you are just beginning, we suggest that you choose a medium size aquarium, not too small, nor too large, because as you become more enthusiastic you will want others. In selecting your aquarium, be sure that it is made of non-poisonous material. This is why Better Home Aquariums are individually classed, for the aluminum frames are best suitable for this purpose.

BETTER HOME AQUARIUMS STAND FOR THE HIGHEST QUALITY AT THE LOWEST PRICE

#### **MODERNISTIC**

One of our most popular designs. New modernistic frame, hand finished, trim lines, with sides of bulb edge glass. All aluminum frame that is guaranteed not to rust.

Specially suitable for your home and studio use, but equally as attractive anywhere.

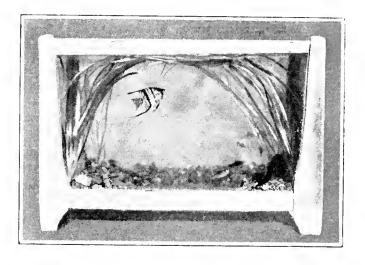

Order by style number.

Order No.	Width	Length	Height	Capacity Gallons	Price
A 100	$8\frac{1}{2}$	12	93/4	3	\$ 5.00
B 101	83/4	$16\frac{1}{2}$	93/4	4	6.00

$D_{507}$	$7\frac{1}{2}$	$24\frac{1}{2}$	14	7	7.00

#### **HEXAGON**

The Hexagon is a beautiful display of workmanship. Has an alluring interest everywhere. Highly polished all aluminum frame, with sides of bulb edge glass. Black heavy slate bottom extending one inch from the frame. Two sizes. One measuring  $24\frac{1}{2}$  inches from point to point, and  $11\frac{1}{2}$  inches high. Large size measuring 36 inches from point to point, and is  $13\frac{1}{2}$  inches high.

#### Order No.

A 600 24½x11½ holds 25 gallons for \$30.00 B 601 36 x13½ holds 50 gallons for \$65.00

# THE BETTER HOME AQUARIUM

The Better Home Aquarium has a gorgeous Italian marble base, two inches thick, with special designed corners, and sides of heavy plate glass. All aluminum, highly polished, with base extending two inches from the frame. This is a beautifully constructed model of life-time durability. Priced exceedingly low.

Order No.	Width	Length	Height	Capacity Gallons	Price
A 700	$31\frac{1}{2}$	$15\frac{1}{2}$	$18\frac{1}{2}$	32	\$50.00

## HAVE YOUR AQUARIUM DESIGNED

#### CUSTOM MADE

Have your aquarium custom made with your own specifications. We can make any size or style to fit in any space. Just what you want. Send us your measurements.

# TROPICAL FISH

Where you have limited space and wish for a variety, you will find that the many Tropical species you have to choose, will satisfy your desire.

Most all of these fish can stand close quarters, but there are a few that have such fighting dispositions that they must be kept alone.

The question of space is not the main point in raising this kind. It is an endless habit when one starts.

The tropical fish are beautifully colored, and can be cross-bred to an amazing result.

The beginner will probably want to have some of every group, but it is best not to begin with expensive ones. Gradually increase your stock, then you will always have good luck. Tropical fish are not heavy feeders, and once daily is plenty for them.

Balance your aquarium with good oxygenating plants. Your species live by absorbing oxygen, and as they give off carbon dioxide as their waste product; oxygenating plants with the proper light will do the opposite. So what is poison to one is life to the other.

Tropical fish thrive well in temperatures 65 to 100 degrees.

MOLLENSIA (Mollienisia) Life-Bearing  Sailfins (Gray Top Fins)\$1.00 pr. Black (Jet Velvet Black)	Barbus (Very Peaceful)

# **GOLDFISH**

Your goldfish will depend largely on the care you give them. Failures are usually caused from the following: Overfeeding, overcrowding, temperature changing, and insufficient plant life.

Never overcrowd your aquarium. The usual rule for raising goldfish is one inch of fish to one gallon of water. If your fish come to the top gasping for air, this is a good sign of overcrowding. However, they will do the same if your water is polluted. Your fish will suffer if this is not remedied.

Overfeeding is the cause of more failures than any other reason. There is less danger of starving, than overfeeding them. If they do not consume all of the amount you give them within a few minutes, remove the surplus with a diptube.

Don't subject your fish to temperatures higher or lower. This will prevent later regrets.

#### Japanese Fantails

# AQUATIC PLANTS

Oxygenating plants take a very important part in your aquariums and pools. They produce the oxygen that your species must have to thrive vigorously. Select good plants that are beneficial, as well as ornamental.

### **OXYGENATING PLANTS**

SAGITTARIA
White flowering plant with bright green slender leaves ....10c ea., 75c doz.

#### VALLISNERIA

Grass-like plant. Very decorative with leaves the same breadth the entire length. Light green, 2 plants 5c, 40c doz.

#### LUDWIGIA

Leaves with changing colors when kept in strong light ....10c bunch, \$1 doz.

#### SPATTERDOCK

#### ANACHARIS

A fast growing plant desirable for pools and aquariums ....10c bunch, \$1 doz.

#### CABOMBA

Finely cut fan-like leaves. There are several varieties of this plant and our plant is much more filled out compared to the others. Bright green. 10c bunch, \$1.00 doz.

#### MYRIOPHYLLUM

Hair-like leaves. Good for goldfish spawning ......10c bunch, \$1.00 doz.

#### FONTINALIS

Known as willow-moss. Clings to stones and objects. Dark green. 50c portion.

#### HOW TO PLANT

Put several inches of sand in the bottom of your aquarium and place your plants to suit your taste. They will take roots and grow very quickly.

## COLLECTION OF OXYGENATING PLANTS

No. 3—30c No. 4—60c No. 1-\$1.00 No. 2—25c 1 bunch Anacharis 1 bunch Cabomba 1 portion Fontinalis 1 Sagittaria 1 bunch Anacharis . #### FLOATING PLANTS

Floating Plants are specially recommended for the fish to spawn. The dense roots being ideal for holding the spawn close to the surface of the water where the eggs will have plenty of warmth and sunshine.

#### **AZOLLA**

Floating fern-like leaves. Velvety looking and range from a dull green to dark red. 25c portion.

#### **CRYSTALWORT**

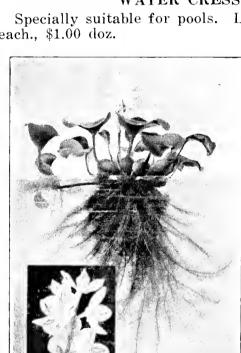

Small plant that grows in masses, angular shaped. 50c portion.

#### **DUCKWEED**

One of the commonest of all floating plants. Good for goldfish that are large enough to eat it. Spreads over the top of the water. 25c portion.

#### WATER CRESS

Specially suitable for pools. Light green. 10c each., \$1.00 doz.

WATER HYACINTH

# WATER POPPY

#### WATER POPPY

Three petalled yellow flower with brown center. Grows rapidly and rooting new plants, which have 

#### WATER HYACINTH

Pale lavender spike-like blossoms. Very beautiful. and will produce freely, if not allowed to drift about. Shown in insert figure ......10c ea., \$1.00 doz.

#### SALVINIA

One of the best of floating plants with heart-

#### WATER LETTUCE

Light green leaves forming a rosette. 10c ea., \$1.00 doz.

#### WATER FERN

Grows in masses, producing new plants on its leaves. This plant is about six inches in diameter. 

#### FLOATING PLANT COLLECTIONS

No. 1—\$1.50

One Water Poppy One portion Duckweed

One Water Hyacinth One Azolla One Water Lettuce One Salvinia

One Water Fern One Crystalwort No. 2—35c

One Water Poppy

One Water Lettuce One Water Hyacinth

One Water Fern

No. 3—\$1.00

One portion of Azolla One portion of Crystalwort One portion of Duckweed One portion of Salvinia

#### MARGINAL PLANTS

#### FLOATING HEART

#### PARROT FEATHER

#### UMBRELLA PALM

Very decorative and ideal for bordering. Will grow in wet or dry soil. 20c ea.

#### **BOGBEAN**

White cluster flower mixed with pink on long stems. Fragrant ......3 for 50c

#### **CATTAILS**

Very attractive when planted very close. Has dark brown spike-like flower, well above the foliage ......\$1.00 doz.

#### WEEPING WILLOW

#### FLOWERING RUSH

#### PICKEREL WEED

Spikes of blue flowers producing freely. Very hardy and the total growth being about 2 feet ...... 2 feet 50c ea.

#### ARROWHEAD

Hardy plants producing from one to three feet high with cluster flowers ......50c ea.

#### AQUATIC PLANT COLLECTION

One Weeping Willow
Six Cattails
One Parrot Feather
Three Flowering Rush
\$2.50

One Floating Heart

1 Parrot Feather
One Umbrella Palm
Three Flowering Rush
One Pickerel Weed
One Arrowhead

One Cabomba
One Water Poppy
One Water Hyacinth
One Floating Heart
One Cattail
One Weeping Willow

\$1.50

#### POOL AND HOW TO BUILD IT

Ornamental pools are a never-ending source of delight. From early spring until late fall, your garden pool is a beautiful stage for enjoyment of colorful fish and aquatic plants. The ornamental pool is the center of enjoyment in your "outdoor living room."

#### DESIGNING THE POOL

The general character of your garden—whether it is formal, or informal in a natural setting—will suggest the style.

Small species of water lilies require only a small pool—three-feet or

more in diameter. Larger varieties must have a pool at least six-feet wide. Depth depends on the type of planting. For water lilies, a depth of at least 22 inches is desirable.

Garden pools may be combined with rock gardens, often with a miniature waterfall running down a rocky course into the pool.

#### BUILDING THE POOL

Excavate to the required depth including the thickness of the floor. Pools with vertical sides are built with forms. If the soil is firm, no outside form is needed.

Pools with sloping sides often are built by "plastering" a stiff concrete in place. Wire mesh reinforcement is used. Natural rock may be set in the concrete. Pools having curved or irregular shaped walls are made with forms of 20 gauge galvanized iron, readily bent to the desired shape.

#### REINFORCEMENT

Support the interior wall forms across the top of the excavation so that the bottom hangs six inches from the bottom of the pit. Spreaders, or braces, extending across the pool from one form to the other, prevent bulging when the forms are filled with concrete.

#### PLACING THE CONCRETE

Oil the inside of the forms so that concrete will not stick to them. First place the concrete for the floors. Then deposit the concrete for the walls in 6 or 8 inch layers all around the pool, spading each layer as it is placed. A garden hoe, straightened out, makes a good spading tool.

Often pools are built partly above grade. A foundation two or three feet deep should be used.

#### WATER SUPPLY

The pool may be filled with a garden hose or connected with the regular water supply. It may be emptied with pail or a built-in drain.

Make any plumbing connection before the concrete is placed.

#### MAKING THE CONCRETE

Strong, durable, watertight concrete is easly made. Most important is the amount of water used per sack of cement.

Use about  $4\frac{1}{2}$  to 5 gallons of water per sack.

The correct mix (determined by a trial batch) should be plastic, holding its shape well but not crumbly; if too stiff, use slightly less sand and gravel; if "runny," add sand and gravel until the proper proportion is obtained.

(1) Make a dry mixture of about one part cement, two parts clean sharp sand, two and a half to three parts clean gravel. Mix thoroughly until the color is uniform, no gray or brown streaks.

(2) Add correct amount of water and mix until sand and pebbles are thoroughly coated with cement paste.

The concrete should be placed within thirty minutes.

#### **CURING**

Do not permit newly placed concrete to dry out. Protect it from the sun and drying wind for a week to ten days. A covering of burlap or canvas, sprinkled often enough to keep it moist, is a satisfactory covering while curing.

# The Hardy Water Lilies

#### WHEN TO PLANT

Hardy Lilies may be planted any time after growth begins in the spring; and as late in the fall as will let them become established, generally about six weeks before real cold weather sets in from February on in the Southern and Pacific States. In the Middle West and East April is early enough. In the Northern States April gives plenty of time. Planting may be continued throughout the late spring and summer with great suc-

cess. In mild climates Hardy Lilies may be planted almost the year around.

Water lilies are so easily grown, even by those who have had no previous experience. In fact, water lilies are easier to grow than the commoner garden plants. It is not necessary to drain the pool at all during the growing season, simply adding water to replace evaporation.

#### HOW TO PLANT

The root of the Hardy Lilies should be pressed into the mud so that the growing tip is covered. Should the roots float after planting, weight with a stone until the new feeding roots have caught hold. If the bottom is very hard or stony, plant lily roots in light holders filled with good heavy loam to which one-fourth cow manure has been added and sink in the desired spot. For most blooms water depth should not exceed two feet in summer, but be careful to select a spot well covered by water in winter. The winter depth is unimportant; the deeper the safer. Hardy Water Lilies will bloom in 1 to 3 feet of water but not so profusely.

#### WINTER CARE

Hardy Lilies grow wild in cold northern regions and need no protection other than from direct freezing of the roots. Where the water is deep enough not to freeze below the roots they will come through unharmed. Since dry rot is the worst enemy of stored roots in the winter it is best to leave them in the pool under natural conditions. Cover the pool well with boards then apply a thick covering of leaves or straw and the water will not freeze deeply or crack the cement. This is the ideal way to winter hardy aquatics and goldfish. If the pool must be drained the lilies should be removed to a cold cellar or placed in a deep trench and well covered, keeping moist at all times.

#### WHITE

#### Marliacea Albida

Pure white flower with yellow stamens, and the sepals are tinted pink. One of the best while water lilies grown being of free growth and blooms. Very fragrant. \$1.10.

#### Gladstoniana

Large white flowers, cup-shaped, with yellow stamens. Leaves of dark green striped with brown. Fine shaped and strong growth. This plant will hold its leaves and flowers above the water. \$1.65.

# TROPICAL WATER LILIES

Tropical Lilies may also be planted in natural ponds and lakes provided a very shallow spot is selected (8 to 10 inches deep), and the pond or lake maintains a fairly high temperature all summer (at least 65 degrees). Water Lilies of any variety, for best results, should not be planted near a cold inlet nor in swiftly moving water. In fertilizing natural ponds cow manure may be layed on the ice to a depth of one inch or more. It will become water-logged in spring and sink. Bone meal may also be used in a like manner. Apply at the rate of one pound per square foot.

Containers for planting in constructed Pools may be anything from a large flower pot, a plant tub, or a box one foot square and six inches deep, to a tub two feet in diameter and a foot deep, or a box two feet square and eight inches to a foot deep. The larger the container, the greater the amount of soil given the plant, therefore more and larger blocms will result. Allow each Water Lily 8 to 12 square feet of water

surface.

The soil, whether placed directly in the Pool or in containers, should be a good, heavy, garden loam. The addition of one part well rotted cow manure to every four parts of soil will prove beneficial. A mild commercial fertilizer may be used. Tropical Lilies may be planted any time after settled weather is assured; usually after May 20th in the latitude of Chicago. Plantings farther South may be made much earlier. We ship at the proper planting time for the locality in which the planting is to be made. We also ship at any time, on request. Tropical Lilies may be grown and flowered continually for many years in a greenhouse, conservatory, or sun room pool simply by giving the proper temperatures and additions of fresh soil occasionally. Tropical Lilies planted out too early in cold water; or in water that is too deep for young plants (over 12 inches) or in a heavily shaded pool tend to go dormant. When this happens the plant is not dead; and by placing root in warm sunny water growth will recommence. It is to avoid this unnecessary delay in growth that we advise against too early planting. For greatest number of blooms throughout the season only 8 to 12 inches of water should be allowed over the crowns. When plants are received set out in shallow water; then fill up the pool as the plants commence to grow. For best results the pool should be exposed to full sunlight.

# Day Blooming WHITE

Mrs. George H. Pring

White flowered with golden yellow stamens. Petals and sepals are long and pointed. Very fragrant and measuring from eight to ten inches across. Free blooming all the season. \$2.00.

Gracilis (Mexico)

Star-shaped on stems above the water from twelve to fifteen inches. Pure white flower with deep yellow stamens, slightly fragrant. Blooms profusely all the season. \$1.65.

#### PINK LILIIES

Mrs. Robt. Sawyer

Plant sturdy, producing young plants on the leaves; flowers in abundance; gorgeous, full-petaled, and of a delightful shade of pink. \$3.00.

Zanzibariensis Rosea.

Light and deep rose colored flowers of good size. Produce very freely. \$1.50.

General Pershing

Petals are bright pink, and the sepals are light pink on the inside. This flower, on stems twelve inches above the water and very fragrant. The flowers are from eight to ten inches across and very lasting. \$3.25.

Mrs. C. W. Ward

Fine growing plant of deep rosy pink color and golden yellow stamens tipped with pink, measuring from eight to ten inches across. Petals and sepals are long and pointed. Free flowering. \$2.00.

Gracilis Rosea

Large size flowers of deep pink, on stems well above the water, measuring from eight to ten inches across. A seedling of Gracilis. \$2.00.

#### **PURPLE LILIES**

#### Panama Pacific

Beautiful flower of reddish-purple with yellow stamens. First opening the flowers are a rich red, changing to the purple as it ages. This lily is one of the best known, for its beauty and easy growth. The buds are bronzy-green, and spotted with maroon as are the leaves. This variety produces young plants on its leaves. \$2.00.

#### August Koch

The sepals are lilac purple and the petals pale wisteria violet. Measuring from seven to eight inches across on stems about eight to ten inches across. Bears young plants on its leaves. Excellent bloomer. Foilage of dark green, \$2.50.

#### BLUE LILIES

#### Mrs. Ed Whitaker

One of the largest of the day-flowering lilies. The flowers are light lavender-blue when first opened, still lighter as it ages. This plant will often measure ten inches in diameter and will last long. The leaves are round and mottled. \$2.50.

#### Pennsylvania

Large size light blue lily, measuring from eight to twelve inches across; the stamens are yellow tipped with blue and the sepals are striped and spotted. Free blooming all the season. \$2.50.

#### Capensis

Flowers are light sky-blue, medium size. Produced freely. \$1.50.

#### William Stone

Violet blue with stamens of purple and deep yellow centers. Strong stems from twelve to fifteen inches above the water. Produced freely. \$2.00.

#### Henry Shaw

Without doubt one of the firest lilies we know. Fine campanula-blue in color, producing an astonishing number of flowers even when tiny. Its moderate leaf spread makes it popular for small pools. \$2.25.

# Night Flowering RED LILIES

#### Devenshire

Flowers of bright rosy-red with stamens of cinnabar red. The flowers are from eight to twelve inches across with stems well above the water. Free blooming. \$2.00.

#### George Huster

Brilliant crimson flowers with stamens of deep orange-red. This plant is one of the finest and free blooming of the night flowering class. \$2.00.

#### Bisset

Rosy-red flowers, with a tinge of white in the center of the petals. Leaves of bronzy green. Similar to the Geo. Huster. \$2.00.

#### Frank Trelease

Dark red flower with stamens of reddish brown. Measuring from eight to ten inches across. Leaves of dark bronze color. \$2.00.

#### WHITE LILIES

#### Juno

Immense, pure white flowers opening widely, the central disk being surmounted by a cone of saffron yellow stamens. The large glossy green and finely toothed leaves are very ornamental. Seen in the dusk of evening the flowers are a never to be forgotten sight. A splendid and stately flower. \$2.00.

#### PINK LILIES

#### Ruba Rosea

Deep rosy carmine color with stamens of reddish brown at the tips and yellow-brown at the base. Large flowers with deep green leaves. \$2.00.

#### Omara

Red with faint tinge of white in the center of the petals. Stamens of orange-red. A vigorous grower with large flowers. Leaves of deep green. \$2.00.

#### Jubilee

White flowers with petals and sepals of pink at the base. Eight to ten inches across. Leaves, green and brown. \$2.00.
